JUAN MANUEL
SANJURJO

Software developer

PROFESSIONAL PROFILE

I am a developer with a passion for technology and a constant dedication to learning. I am looking for opportunities where I can apply and expand both hard and soft skills.
Previously (2008 to 2021) I applied my skills in the tourism sector. My experience in this field has provided me with a solid foundation in project management, teamwork and adaptability, skills that I consider essential in any collaborative environment.

EXPERIENCE   2021 - Present

Links to projects - in the titles or on my GitHub

Simulation (No Country) - App RecetApp   - React, mui, spring boot
Participation in the No Country simulation program. Development of an application that allows users to search, create and share recipes. Registered users can comment, rate and save recipes. As part of a team with varied roles, I contributed mainly on the frontend and to a lesser extent on the backend, working alongside developers, QA, and UX/UI designer to create a functional and attractive platform

Youtube clone - React
Responsive clone of YouTube, using React. It features default tabs filled with content and a search functionality. The playback section shows suggested videos and received comments. This a practical demonstration on the use of APIs to fetch and display data in a real-world application.

Pokedex - React
Web app developed in React. Uses the PokeAPI to display information about different Pokémon's. The app allows you to search and filter by name or id, view details of each species, and explore their abilities, moves, and more. The responsive layout includes a collapsible side menu for related links.

Degree's final project - pet caring app - PHP
In this project users can register as either a pet owner or a pet keeper. Different layouts are presented for each type. Owners can search for potential keepers, select dates, and communicate directly with the keepers. Pet keepers can manage their schedules, view requests from owners, approve or reject them and send payment orders to the pet owners.

Text editor using (desktop app) - Tauri, Monaco
Lightweight single page desktop editor harnessing the capabilities of Monaco and Tauri . Featuring multi language support, key bindings for managing files. The initial conception of the application was to edit and save code snippets, but you can open and edit any file.

🧰 COMPETENCES

| JAVASCRIPT | JAVA | C | PHP | HTML | CSS | TAILWIND CSS | NODE JS | REACT JS | GIT |
| NEXT JS | EXPRESS | TYPESCRIPT | SQL | ASTRO | UX/UI | FIGMA | MATERIAL UI |

📷 SOFT SKILLS

| TEAMWORK | EFFECTIVE COMMUNICATION | ADAPTABILITY | EMPATHY | PUNCTUALITY | UX ORIENTED |
| TIME MANAGMENT | COOPERATIVE | SITUATIONAL LEADERSHIP | CUSTOMER SERVICE & HOSPITALITY |
| PROBLEM ORIENTED |
